#### WORKING PAPERS

"Safer Sex? The Effect of AIDS Risk on Birth Rates" (Job Market Paper)

The advent of HIV/AIDS in the 1980s dramatically increased the cost of contracting a sexually transmitted infection (STI). Prior research shows that people responded to the AIDS epidemic by switching to sexual behaviors and contraceptive methods with lower likelihood of AIDS transmission. These behavioral adjustments also affect the likelihood of pregnancy and the incidence of other STIs. This paper provides evidence that the AIDS epidemic increased the birth rate among adult women by as much as 1.26 births per 1000 women and reduced gonorrhea incidence. The fertility results are driven by an increase in births to unmarried women, but only among births for which information on the father is available. I conclude that unmarried women responded to AIDS by entering monogamous relationships, which in turn led to an increase in the birth rate.
